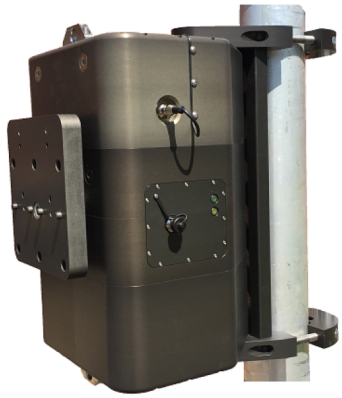
QLA-60EBP-30

AUTO LINK ALIGNMENT AND MAINTENANCE FOR MILLIMETER WAVE LOS



The QLA-60EBP-30 is a Power Over Ethernet (PoE) antenna positioner designed from the ground up to point and automatically peak directional side arm mount antennas for millimeter wave links up to 90GHz.

Millimeter ware radios specifically in the 60GHz to 80GHz range have very narrow beam widths which require very precise pointing and stable masts to maintain a link. Often these links come out of alignment or become less optimized due to thermal expansion of the tower, wind events, or other environmental conditions. The QLA-60EBP-30 corrects for these disturbances to maintain the highest Quality of Service available without the down time and reoccurring cost due to manual realignment. Once aligned, our software will maintain your link automatically based on an RSSI threshold setting or can be manually peaked on demand from anywhere on your network.

The QLA-60EBP-30 is typically paired with 3 to 4 foot side arm mount antennas, payloads up to 300 lbs (136.07 kg), and offers +/-30° of azimuth and elevation range.
